

DATASHEET

Powder Nail is designed to effectively and safely commence operation in a first response. As a first response person using a Powder nail enables quick and can shock a fire and prevent fire spreading.

Dry Chemical extinguisher combined with the powder nail is suitable for compartment fires, house fires, attics but also for vehicles and vessels, workshops, etc.

Spray pattern Restrictor

Powder Nail comes with a hose where quick connector on one side to easily switch between attack and restrictor nails. On the other side sits a universal coupling that makes you do not need to remove any hose from the fire extinguisher, just push the powder hose into the connector and tighten by hand, see picture below.

Spray pattern Attack nail

Universal coupling fits most powder hoses / dry chemical extinguisher on the market today. Without tool you change quickly and easily between extinguishers in just seconds.

Powder nail

The 700 mm long nail can be easily used with common Fog nail hammer or drill to get through an outside wall or through the roof.

Technical data
